

Energy Finance, Accounting and Logistics, Academic Certificate

Most of the jobs require contract or legal-based rather than theoretical knowledge with the emphasis on negotiation, written and oral communication skills. While there are few Energy Commerce programs, most university graduate students are specialized in areas such as accounting, marketing, management, etc. In order to help College of Business Administration students to distinguish themselves in the market place, College offers a core energy education, an Academic Certificate in Energy Finance and Logistics, for graduate students interested in energy finance and lending, commodity trading, negotiations, and logistics. All graduate degree seeking students must complete their coursework with a grade "B" or better.
